## RAMPA NEWS

we are pleased to introduce our latest product innovation - the RAMPA inserts type SKD30K as an alternative to RAMPA inserts type D and DVZ. These short threaded inserts have been specially developed for use with thin materials, offering a wide range of applications, which can be particularly useful in areas such as seat shells.

### **Advantages of the RAMPA inserts type SKD30K**

#### **Wide range of applications with thin wood materials:**

SKD30K inserts are perfectly suited for use in various applications in wood and wood-based materials, especially thin wood materials such as seat shells. In this context, they enable secure and stable fastening that is also always releasable - and without any loss of quality.

#### **Environmentally friendly and certified:**

RAMPA inserts type SKD30K comply with RoHS and REACH directives, guaranteeing not only top quality but also environmental compatibility. In addition, the steel-galvanized parts are available exclusively in lead-free.

#### **Highest possible pull-out values thanks to 30° external thread:**

Thanks to the 30° external thread, SKD30K inserts offer outstanding pull-out values ensuring reliable fastening, thus providing maximum stability.

#### **Lower torque when screwing in:**

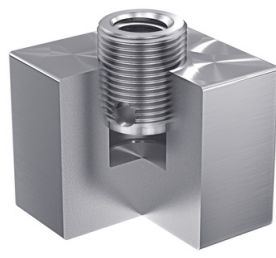

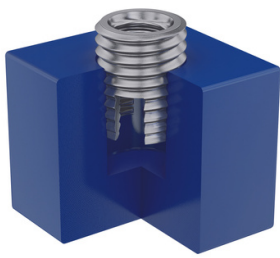

The 1-start thread contour of SKD30K inserts requires less torque to screw in, resulting in easier and faster assembling.

#### **Full-length hexagon socket thread usable:**

The inserts are equipped with a continuous hexagonal socket thread, allowing you to optimize the assembling process.
